5000

NEW EXPANDED CAPACITY

Copyguard maximises copy cost recovery by ensuring that every copy is recorded for internal charging, or client billing.

DIGITAL & COLOUR COPIERS
PHOTOCOPIERS • LASER & PLAN PRINTERS
CD ROM • MICROFICHE • FAXES

Copyguard
accounts for every copy.

PROFESSIONAL EQUIPMENT FOR THE PROFESSIONAL OFFICE

Keeping ahead in today's competitive business environment requires the ability to control costs and maximise expense recovery. With Copyguard, no copies or faxes can be made without being recorded and allocated.

The Copyguard ALPHA 5000's operating software keeps track of every copy or fax made, when it was made, who made it, the client or department for whom it was made and the rate of charge. This full audit trail capability enables you to confidently bill clients knowing that the supporting details are readily available.

Equally at home communicating via a computer or operating as a self contained system with its own printer, the Copyguard ALPHA 5000 allows you to select, from a comprehensive range of options, the features that best suit your specific business requirements. Add to this the Alpha 5000's ability to send data direct to Copyguard's powerful PC based Management software and it's easy to see why Copyguard leads the way in copier control systems.

ALL THE FEATURES YOU REQUIRE

The Copyguard ALPHA 5000 is a powerful, state of the art microprocessor control device that is straight forward yet flexible in operation.

SELECT ONE, TWO OR THREE LEVEL CODE ENTRY

The ALPHA 5000 offers up to three levels of code entry; user only, user and client, or even user, client and cost centre. Code fields can

be set in either 'Security', where the code is validated against pre-entered data; or 'Auto Entry', where codes may be entered without validation.

MULTIPLE COSTING LEVELS

Costs may be set as a single overall rate or individually for each code. It is also possible to select from a table of cost rates and override the pre-set individual code rate with a run rate.

POWERFUL DATA BASE

All usage is separately recorded for each activity and held in the units data-base as a separate time/date stamped record designed to support a wide range of usage and audit trail reports.

REPORTING

Retrieval of the data can be with a Copyguard CG Print II, or through the units RS232 serial port to a serial printer or, by direct serial link to a computer.

The Copyguard ALPHA 5000 has been designed with the computing power and flexibility needed to meet the requirements of today's modern, professional office.

OTHER PRODUCTS FROM COPYGUARD:

PX 2000

- 6000 department/account code capacity.
- Each code may be up to 12 digits in length.
- Operates as a 'stand alone' system using the CG Print II or, linked to a central computer, offers the time saving efficiency of an 'on line' system.
- Records both copy cost and copy count.
- Also available as the PX 2000 CARD.

CG CARD 300

- Offers the uncompromising security of Copyguard access cards
- 4400 account codes
- An easy to use system with the optional dual capability to record usage by department/cost centre as well as user.
- May also be operated as a 'pre-paid' card system.
- Supports printers.

CG 250

- Handles 4400 user account codes of up to 6 digits in length.
- Both copy cost and copy count can be recorded for each user.
- Data may be viewed via the display or printed out using the Copyguard CG PRINT II or a serial printer.
- Security or auto entry mode.

CG 40

- Now handles 4400 codes.
- The economical CG40 provides full sized capacity as well as offering serial printing ability.
