

COPYGUARD™

Make every copy count.

Copyguard PX2000

This powerful 6,000 code system has the flexibility to stand alone, be used in conjunction with the CG Print II printer or be linked for download of information to a PC running the companion Copyguard PX2000 management software.

PIN Access

■ Applications

The **PX2000** is suitable for expense recovery in professional offices and budgetary cost control in schools and institutions.

■ Code Lengths

Codes may be from 1 to 12 digits long.

■ Number of codes

The **PX 2000** can handle up to 6000 codes.

■ Copy limits

A copy limit of any value between 1 and 999,999 may be set for any code. A global value may be input within this range and automatically applied to any code on entry. Code limits may be edited to any value, within the range, at any time by the supervisor.

■ Copy costs

A copy cost may be programmed into the unit and copy costs as well as copy volume may be reported.

■ Sub-totalling

Features

- Secure supervisor key controlled entry and deletion of codes
- Keyboard lock
- LCD display
- The display may be set into concealed mode for extra security
- Battery backup
- Power source: Normal mains power
- Dimensions: 200mm x 100mm x 50mm
- Each unit comes with: User manual, Installation kit and Installation instructions.

Companion Management Software available

The PX2000 can be easily programmed to allow groups of codes to be subtotaled. This facility is most useful where there is a requirement to record copier usage by department as well as each person within the department. Both the number of copies and the cost can be reported. This feature is often used in secondary schools for monitoring usage by departmental budget area.

■ Open Access

The **PX 2000** may be set to operate in Auto-Entry mode for applications where validation is not required. This mode is often used in professional offices for recording copies against client codes for billing disbursements. When used in this mode the unit allows the length of the code to be pre-set to the number of characters in the client code.

■ Computer Connection - PX2000 Management Software

The **PX 2000** may be connected to a PC running the Copyguard PX 2000 management Software. The connection is possible by direct serial cable or by the optional TCP/IP connection box to a network.

The Copyguard PX 2000 Management Software enables the easy download of information and merger of files from all Copyguards into a consolidated report. Reports may be exported, archived or printed from the software.

■ Printed Reports

Reports may be read from the screen or printed with the companion **CG Print II** printer.

The **PX 2000** has 10 print report options.

The system will print a report of either the complete list of codes or only those codes with a recorded count. This may be done with or without limit information.

Printouts may be started from any code in the list.

The **PX2000** can print and delete a single code and information.

The unit is able to give a printout report of the last three

users of the system.

■ **Docket Print**

The **PX2000** can be set to print (via the **CG PRINT II**) a transaction docket following the completion of each photo copy session. This is in addition to the unit's ability to continue to record all activity for a full print-out of all codes when required by the supervisor.

■ **User Friendly Keyboard**

The **PX 2000** provides secure, easy to operate numeric keyboard access control.
